CB23F35 Low-Code Application Development Using Zoho Creator

UNIT – V

Beyond Low-Code Limitations, Pro-Code & Professional Engineering Practice

MCQ (Multiple Choice Questions)

1. What is a major limitation of low-code development platforms?

A) They require writing all code manually

B) They may restrict customization and complex functionality

C) They cannot create user interfaces

D) They do not support application development

Correct Answer: B) They may restrict customization and complex functionality

2. What does pro-code development primarily involve?

A) Developing applications using traditional programming languages

B) Developing applications without any coding

C) Using only drag-and-drop tools

D) Avoiding software testing

Correct Answer: A) Developing applications using traditional programming languages

3. Which of the following is an example of a pro-code programming language?

A) HTML visual designer

B) Java

C) Drag-and-drop builder

D) Form designer

Correct Answer: B) Java

4. When should developers consider moving beyond low-code platforms?

A) When building a simple form

B) When creating a basic dashboard

C) When complex customization or advanced integration is required

D) When no application is needed

Correct Answer: C) When complex customization or advanced integration is required

5. What is the primary purpose of an API in software development?

A) To design application logos

B) To enable communication between software systems

C) To increase file size

D) To replace all databases

Correct Answer: B) To enable communication between software systems

6. Which practice helps maintain code quality in pro-code development?

A) Avoiding documentation

B) Ignoring errors

C) Code reviews

D) Copying code without verification

Correct Answer: C) Code reviews

7. What is version control used for?

A) Tracking and managing changes to source code

B) Increasing processor speed

C) Designing database tables automatically

D) Removing all software bugs

Correct Answer: A) Tracking and managing changes to source code

8. Which tool is commonly used for version control?

A) Microsoft Paint

B) Git

C) Calculator

D) Notepad only

Correct Answer: B) Git

9. What is the main objective of unit testing?

A) To test individual components of software

B) To test the entire internet

C) To design application layouts

D) To deploy software without verification

Correct Answer: A) To test individual components of software

10. What does CI/CD stand for?

A) Code Integration / Code Design

B) Continuous Integration / Continuous Delivery or Deployment

C) Centralized Internet / Centralized Database

D) Computer Installation / Computer Development

Correct Answer: B) Continuous Integration / Continuous Delivery or Deployment

11. What is technical debt?

A) Money borrowed to purchase software

B) Future maintenance costs caused by quick or suboptimal technical decisions

C) The cost of computer hardware only

D) A software license fee

Correct Answer: B) Future maintenance costs caused by quick or suboptimal technical decisions

12. Which of the following is an essential security practice in application development?

A) Storing passwords in plain text

B) Sharing secret keys publicly

C) Validating user input

D) Disabling authentication

Correct Answer: C) Validating user input

13. What is the purpose of software documentation?

A) To make software development more confusing

B) To explain the design, functionality, and maintenance of software

C) To replace software testing

D) To eliminate the need for developers

Correct Answer: B) To explain the design, functionality, and maintenance of software

14. What does scalability mean in software engineering?

A) The ability of a system to handle increasing workloads

B) The ability to reduce code readability

C) The process of deleting source code

D) The ability to operate without hardware

Correct Answer: A) The ability of a system to handle increasing workloads

15. Which approach is best for integrating a low-code application with a custom-built service?

A) Ignore the service requirements

B) Use suitable APIs or custom code

C) Remove the application's database

D) Disable all external connections

Correct Answer: B) Use suitable APIs or custom code

16. What is the primary purpose of refactoring?

A) To improve code structure without changing its external behavior

B) To add unnecessary features

C) To delete all tests

D) To change the programming language every day

Correct Answer: A) To improve code structure without changing its external behavior

17. Which of the following is an example of professional engineering practice?

A) Ignoring user requirements

B) Skipping security checks

C) Following coding standards and ethical guidelines

D) Hiding defects from stakeholders

Correct Answer: C) Following coding standards and ethical guidelines

18. What is the main purpose of integration testing?

A) To test how different software modules work together

B) To test only the application's color scheme

C) To install an operating system

D) To create source code automatically

Correct Answer: A) To test how different software modules work together

19. Why is maintainability important in software engineering?

A) It makes future updates and bug fixes easier

B) It prevents all future software changes

C) It removes the need for testing

D) It guarantees that software never fails

Correct Answer: A) It makes future updates and bug fixes easier

20. Which factor should guide the choice between low-code and pro-code development?

A) The popularity of the platform alone

B) The color of the development environment

C) Project complexity, customization needs, security, and maintainability

D) The number of buttons in the interface

Correct Answer: C) Project complexity, customization needs, security, and maintainability
